

My main objective is to be able to program a front end website using HTML, CSS the two programming languages that are the basis of all websites, and Bootstrap too, and to know how to use Github and Git by performing several git command lines.

For this, I decided to create an e-commerce website that requires a lot of work to project myself into the real world of companies that create e-commerce sites and not make a simple site. Personally, I find that all parts of my site are neither easy nor difficult, since I use a lot of online courses and tutorials in youtube, all that, it makes my creation of my site easier.

Regarding the Github part, Here is the link to access my project : <https://github.com/AGUIRI/CPSC222-Project1-RayyaneAGUIRI.git>

Here is a table that summarizes everything that is done:

Commits	Reason	Date
Commit 1	First Commit	02/09/2020
Commit 2	Create Index page & CSS	02/09/2020
Commit 3	Create footer	02/09/2020
Commit 4	Add paragraph & Favicon	02/10/2020
Commit 5	Add second Page & CSS	02/10/2020
Commit 6	Add 4 other pages HTML	02/11/2020
Commit 7	Add login&Register Page (HTML + CSS)	02/12/2020
Commit 8	Add contact Page (HTML+ CSS)	02/13/2020
Commit 9	Add Cart page + Contact (Changes)	02/16/2020
Commit 10	Changes in Login&Register	02/16/2020
Commit 11	Some Changes	02/21/2020
Commit 12	Last Commit "Add journal"	02/21/2020

In addition, I have not encountered any difficulty with the git commands.

In conclusion, I am very satisfied with my project because as I wrote in the footer of my website **Made with ❤ by AGUIRI Rayyane** because I did not create this website just to get my grade but on the other hand to enrich my knowledge in HTML & CSS...The thing that shows that is that I made 12 pages which contains a home page, login & Register page, cart page, contact page and 8 pages for different products, and in addition to that I used Bootstrap to have a better design.

The only thing I wanted to do but unfortunately I do not have the knowledge to do it: it is to have a database and to link it with my site, for example to have access to our profile with the page Login & Register.
